Dataset Title: AmericasBarometer Survey

Overview: AmericasBarometer survey evaluates democratic public opinion and subsequent behavior in 26 North American/Caribbean countries. The study’s mission is to develop an understanding of what people think about their country in regards to local and national politics, economics, and corruption. The survey uses this information to create lectures, seminars, and Insights (biweekly analysis of policy-relevant data by LAPOP scholars) on national trends and patterns. On occasion, these insight papers take comparative perspective and discuss trends across countries. Survey data has been used by individual Latin American governments and the United States Agency for International Development (USAID) in its attempts to promote democracy and development in Latin American countries. This survey is housed in the Latin American Public Opinion Project (LAPOP) at Vanderbilt University.

The Project on Ethnicity and Race (PERLA) at Princeton University created an ethnicity module for the Americas Barometer Surveys.

Time dimension: Cross-sectional

Sample: Samples for this study were adults in 26 individual countries. The 2012 AmericasBarometer Survey had 41,632 respondents in the 26 countries, but sample size varies by country and year. Sample sizes range between 1,500 and 3,000. Information on sample size and country-specific questionnaires can be found at http://www.vanderbilt.edu/lapop/core-surveys.php
Data source: According to LAPOP’s website, “Nationally representative surveys of voting age adults were conducted in all major languages, using face-to-face interviews in Latin America and the Caribbean and web surveys in the United States and Canada. Samples in each country were developed using a multi-stage probabilistic design (with quotas at the household level for most countries), and were stratified by major regions of the country, size of municipality and by urban and rural areas within municipalities” (“Survey Design”). Some oversamples were used.
